

**Management Assessment Planning
Integrating Sustainability (MAPIS) assesses:**

- **likelihood issues will occur.**
- **level of impact or effect.**
- **level of management or effort needed to deal with or manage the issue.**
- **potential of specialist involvement / interaction.**

In today's challenging times, success is driven by basic philosophy that can be applied at all stages of management and implementation: "STOP, THINK, CONSIDER, RETHINK, RECONSIDER, AND IMPLEMENT then RETINK AND RECONSIDER REGULARLY TO SEEK THE BEST POSSIBLE OUTCOMES FOR ALL".

MAPIS is a modern process that integrates the benefits of sustainability into traditional organisational processes to create a tailored environment for enhanced outcomes / success. The process is:

- ***Simple to use and understand, creating an environment for interaction and innovation.***
- ***Low cost to implement with little disruption to existing operations.***
- ***Provides effective / actionable results that can produce real benefits and cost savings adapted to operating requirements.***
- ***Flexible to all levels of business and projects as well as participants /stakeholders***
- ***Allows for real time updating for operational needs and ability to assess outcomes at relevant opportunities, throughout the lifecycle.***
- ***Allows for update or consideration of corrective actions or new issues as need arises.***
